

Programming a new remote

1. Locate the *Learn/Code* Set button on the motor. This is usually under the lamp cover or on the back of the motor.
2. Press the *Learn/Code* Set button once and immediately release the button. A light on the motor will illuminate.
3. Press the button on the new remote that you wish to operate the door once. The light on the motor will extinguish.
4. Press the same button on the new remote a 2nd time. The light on the motor will begin to flash rapidly.
5. Once the light stops flashing, press the button on the new remote a 3rd time to test the operation of the door.

If the remote did not successfully code to the motor and you only get a continuous flashing light on the motor, you may have held the learn button down too long. To correct this, open and close the door 4 times using an existing remote, then try to code in the new remote again.

WARNING!

This product may contain a coin/button cell battery. Keep product and batteries away from children. Battery can cause severe or fatal injuries in 2 hours or less if swallowed or placed inside any part of the body. Seek immediate medical attention if it is suspected that a coin/button battery has been swallowed or placed inside of any part of the body.
